

A. How much of the opening move survives to the close, by month

$b = E[o\ r]/E[o^2]$: 1 = the open anticipates the close, 0 = the session undoes it all; 95% block-bootstrap band

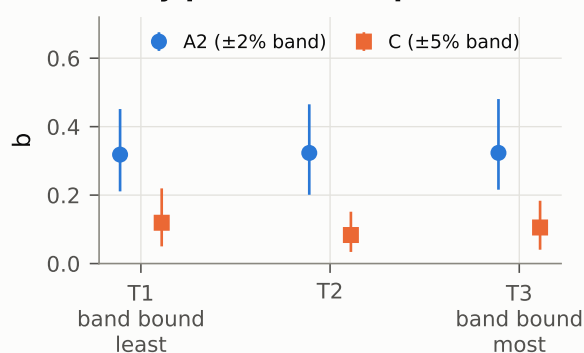

B. The overnight-intraday reversal, by month

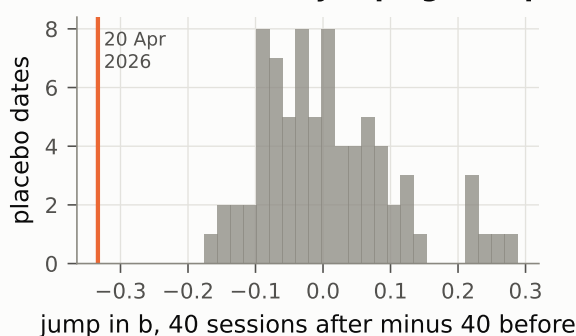

$E[o\ c]/E[P]$: the opening error's footprint, scaled by mean Parkinson variance; 95% block-bootstrap band

C. By pre-reform exposure to the band

D. The reform's jump against placebo dates

Rule changes: 1 = 15-minute VWAP close (20 Mar 2025); 2 = last-trade close again (23 Sep 2025);

3 = Monday-Friday week (6 Apr 2026); 4, solid = pre-open band $\pm 2\% \rightarrow \pm 5\%$ and daily limit $\pm 10\% \rightarrow \pm 15\%$ (20 Apr 2026)
